

We will not go through the textbook chapters linearly.

We will reorder the chapters roughly as follows:

Intro: 1-3

Revision of linear and generalized linear models for independent outcomes (i.e. BIOS 663): 11
(started today!)

[This means that after chapters 1-3, the reading assignment is chapter 11]

Marginal linear and generalized linear models: 5, 6, 12, 13

Mixed models: 8, 14

Marginal versus mixed: 16

Fixed effects: 9

Diagnostics: 10

Sample size: 20
